

NOTES:  
 1. This is the correct version. There are 2IP modules in the top between chips and dual controls. The game is the same as the original version, including the ROM.  
 2. Some values on the Revlog schematic are incorrect. Values with a \* are correct but original Revlog values. Some capacitor types were also changed to match the original PCB. In various or that changed to facilitate and also some resistors were replaced on the original components at the same value.  
 3. Board layout matches original board 1985-11 with the following changes:  
 - Additional signal and frequency added for original board. Some changes.  
 - All headers for continuity and single strip K157 pin spacing.
